Bird migration is the regular seasonal movement, often north and south along a flyway, between breeding and wintering grounds. Many species of bird migrate. Migration carries high costs in predation and mortality, including from hunting by humans, and is driven primarily by availability of food. It occurs mainly in the northern hemisphere, where birds are funneled on to specific routes by ...

Animal migration is the relatively long-distance movement of individual animals, usually on a seasonal basis. It is the most common form of migration in ecology. It is found in all major animal groups, including birds, mammals, fish, reptiles, amphibians, insects, and crustaceans. The trigger for the migration may be local climate, local availability of food, the season of the year or for ...

April 2018: Corresponding with the start of migration by various whale species in the southern waters of Western Australia, two surfers were attacked by what's believed to be a four metre great white shark within hours of each other on 16 April 2018. A 37 year old surfer received extensive leg injuries in the first attack at Cobblestones Beach near Margaret River, and several hours later a 41 ...
