What is the difference between software engineering and system engineering? System engineering is concerned with all aspects of systems development including hardware, software and process engineering. Software engineering is part of this process concerned with developing the software infrastructure, control, applications and databases in the system.

The term software system engineering dates from the early 1980s and is credited to Winston W. Royce, an early leader in software engineering. SwSE is responsible for the overall technical management of the system and the verification of the final system products.

Good systems engineering is a key factor in enabling good software engineering. The SEBoK explicitly recognizes and embraces the intertwining between systems engineering and software engineering, as well as defining the relationship between the SEBoK and the Guide to the Software Engineering Body of Knowledge (SWEBOK) (Bourque, and Fairley, 2014).

Systems engineering can be applied to any system development, so whether you are developing a household appliance, building a house, or implementing a sophisticated transportation management system, systems engineering can be used.

2. Electrical engineering: Within the electrical engineering field, emphasis is attached to the use of systems theory in applications, e.g., spacecraft manufacture and management. As such, systems engineering within electrical engineering tends to emphasize control techniques which are often software-intensive.

In the field of software engineering the master software development plan created by the lead engineer ensures the success of the project and its subprojects. A master software development plan describes the methods adopted by the lead software engineer or manager for a system's composition and interaction.
