

solution and interfacial characterization pdf

A double layer (DL, also called an electrical double layer, EDL) is a structure that appears on the surface of an object when it is exposed to a fluid. The object might be a solid particle, a gas bubble, a liquid droplet, or a porous body. The DL refers to two parallel layers of charge surrounding the object. The first layer, the surface charge (either positive or negative), consists of ions ...

Double layer (surface science) - Wikipedia

Cyclic voltammetry (CV) is a type of potentiodynamic electrochemical measurement. In a cyclic voltammetry experiment, the working electrode potential is ramped linearly versus time. Unlike in linear sweep voltammetry, after the set potential is reached in a CV experiment, the working electrode's potential is ramped in the opposite direction to return to the initial potential.

Organic solvent based TiO₂ dispersion paste for dye-sensitized solar cells prepared by industrial production level procedure Ryohei Mori • Tsutomu Ueta • Kazuo Sakai • Yasuhiro Niida • Yasuko Koshiba • Li Lei • Katsuhiko Nakamae • Yasukiyo Ueda Received: 7 May 2010/Accepted: 13 September 2010

Organic solvent based TiO dispersion paste for dye

A tale of two catalysts: Two different borate catalysts for the epoxidation of aldehydes with diazoacetamides can be generated from boron and VANOL (3,3'-diphenyl-2,2'-bi-1-naphthalol). That these catalysts are different is demonstrated by a nonlinear study on the relationship of the enantiopurity of the product epoxide versus that of VANOL.
